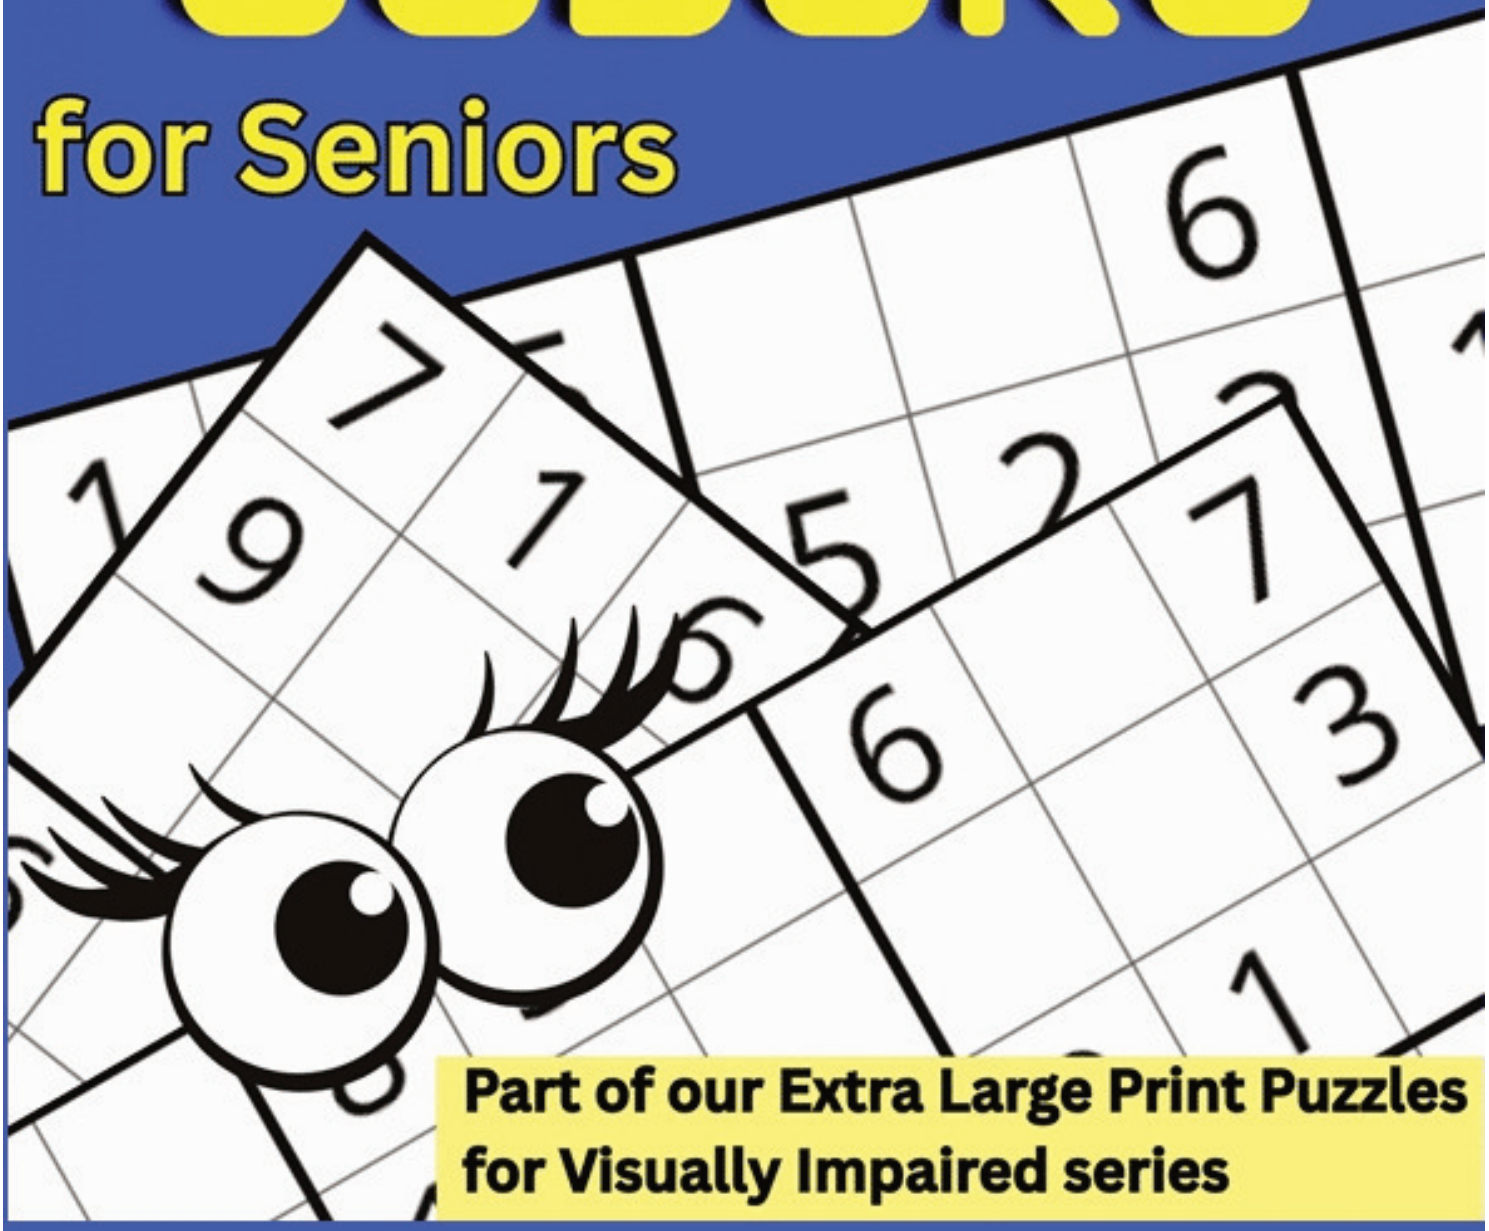
EXTRA LARGE PRINT

SUDOKU

for Seniors



Part of our Extra Large Print Puzzles for Visually Impaired series

Thank you for purchasing this book. My reasoning for formatting the puzzles this way is a bit selfish in that I had been recently diagnosed with glaucoma. So in order to enjoy these puzzles myself in the future, I had to experiment with producing large print puzzles. Hopefully, with the help of all the eyedrops I am now prescribed with, I can easily produce more books for some time to come.

I did include my Sudoku Tutorial at the end of this book in case you need some pointers as to how to go about solving these puzzles. I hope you find them enjoyable and help you to a better state of mind.

Sudoku is a logic-based number placement puzzle played on a 9x9 grid, divided into nine 3x3 boxes. The goal is to fill the empty cells with numbers from 1 to 9.

Here's how to play:

The Grid and Rules:

9x9 Grid: The puzzle is played on a grid with 81 squares, divided into nine smaller 3x3 boxes.

Numbers 1-9: You'll use numbers from 1 to 9.

No Repeats: The core rule is that each number (1-9) can only appear once in each of the following:

- Rows: Each horizontal line must contain 1-9 without repetition.

- Columns: Each vertical line must contain 1-9 without repetition.

- 3x3 Boxes: Each of the nine smaller 3x3 boxes must contain 1-9 without repetition.

Start with the Given Numbers:

Sudoku puzzles come with some numbers already filled in. These are your clues.

Use Logic to Fill in Empty Cells:

Process of Elimination: Examine rows, columns, and 3x3 boxes to identify which numbers are missing. Use the numbers already present to eliminate possibilities for empty cells.

Scanning: Systematically scan rows, columns, and boxes for opportunities to place numbers where only one possibility exists.

Look for Easy Solutions: Many puzzles, especially beginner ones, have obvious placements. Look for rows or boxes with only a few empty cells and figure out the missing number(s).

Don't Guess: Sudoku is a logic puzzle, not a guessing game. Each puzzle has a unique solution.

Pencil Marks: For more challenging puzzles, use "pencil marks" (small numbers written in the corners of a cell) to jot down possible candidates for that cell. Update these as you fill in confirmed numbers.

The Goal is a Completed Grid:

You win when the entire 9x9 grid is filled correctly, with each row, column, and 3x3 box containing numbers 1-9 without repetition.

Sudoku Example

Note: This example is just an introduction into solving Sudoku puzzles and it uses simple logic. There are excellent tutorials on YouTube - my favorite is "Sudoku Guy" :)

Look at this puzzle. Which row or column has the most numbers? Yes, start by focusing on the bottom row. The numbers 1, 4, 7 and 9 need to be added.

			7	3				
					2			6
4	3					8		
				8				7
	9				4		5	
					1			8
		1	4					
6		4					9	
5	8		6			3		2

After careful examination, it was determined that "9" is the correct number to place into the third spot of the bottom row. Look carefully - do you see why this was done? It's because, for the bottom left 3x3 grid, the 3 is blocked everywhere but the space above the 6 and 5 column, and the 9 is blocked above the 8, leaving only space 3 of the bottom row.

			7	3				
					2			6
4	3					8		
				8				7
	9				4		5	
					1			8
		1	4					
6		4					9	
5	8	9	6			3		2

Again, after looking carefully and being patient, it was determined that "7" was the correct digit to be placed into spot six of the bottom row. This is because spots five and eight are reserved for 1 or 4; 1 and 4 are blocked in spot six.

			7	3				
					2			6
4	3					8		
				8				7
	9				4		5	
					1			8
3		1	4					
6		4					9	
5	8	9	6		7	3		2

Almost done with the bottom row! Do you see how it was determined that "1" was the correct digit to be placed into spot five of the bottom row? Yes, it is because the 4 is already present in that 3x3 grid.

			7	3				
					2			6
4	3					8		
				8				7
	9				4		5	
					1			8
3		1	4					
6		4					9	
5	8	9	6	1	7	3		2

By placing the "4" into the final spot of the bottom row completes the bottom row.

Now you would continue the process and fill in the remaining empty spots in the rows and columns.

			7	3				
					2			6
4	3					8		
				8				7
	9				4		5	
					1			8
3		1	4					
6		4					9	
5	8	9	6	1	7	3	4	2

This was **NOT** an easy example, but you got through it!

Do not be discouraged if you find these puzzles difficult at first. With a little bit of practice and determination, you will find Sudoku to be a fun and rewarding pastime!
